MINI PROJECT DOCUMENTATION

AI INTERVIEW PREPARATION PLATFORM

Project Statement: 5 – AI Interview Preparation Platform

Technology / Tool: Base44 AI

Project Type: Web Application

Domain: Artificial Intelligence / Education / Career Development

Live Project:

https://swinging-prep-master-ai.base44.app

Prepared for B.Tech Mini Project

1. ABSTRACT

The **AI Interview Preparation Platform** is a web-based application designed to help students and job seekers prepare effectively for technical and HR interviews.

Many students find it difficult to prepare for interviews because they do not know which questions to practice, how to evaluate their answers, or how to identify their weak areas. The proposed platform provides an interactive environment where users can practice interview questions, participate in mock interviews, receive feedback, and track their performance.

The application was developed using **Base44 AI**, an AI-powered application development platform. The platform was used to accelerate application development through natural-language instructions and iterative refinement.

The platform focuses on improving interview confidence, communication skills, technical knowledge, and overall interview performance.

2. INTRODUCTION

Interviews are an important part of the recruitment process. Students and fresh graduates often have difficulty preparing for interviews because of a lack of practice and personalized feedback.

Traditional interview preparation generally involves reading questions from websites or watching videos. These methods provide information but may not provide an interactive practice experience.

The AI Interview Preparation Platform addresses this problem by providing a single web application where users can practice interview questions, take mock interviews, receive feedback, and track performance.

3. PROBLEM STATEMENT

Students preparing for placements and job interviews often face the following problems:

- Lack of proper interview practice.
- Difficulty finding relevant technical questions.
- Lack of personalized feedback.
- Difficulty identifying weak technical areas.
- Lack of confidence during interviews.
- No centralized platform for interview preparation.
- Limited opportunities to practice mock interviews.

4. OBJECTIVES

The main objectives of the project are:

- Provide an easy-to-use interview preparation platform.
- Provide technical and HR interview questions.
- Conduct mock interview sessions.
- Provide performance scores.

- Provide feedback on user responses.
- Help users identify their weak areas.
- Improve technical and communication skills.
- Increase interview confidence.

5. EXISTING SYSTEM

In the existing system, students generally use different resources for interview preparation, such as YouTube videos, search engines, interview preparation websites, books, notes, and online coding platforms.

Disadvantages: Resources are distributed across multiple platforms; limited personalized feedback; no single platform for complete preparation; manual performance tracking; limited mock interview experience; and difficulty identifying individual weaknesses.

6. PROPOSED SYSTEM

The proposed AI Interview Preparation Platform provides an integrated solution for interview preparation. The user can access different preparation activities from a single web application.

Main activities include practice questions, mock interviews, answer submission, evaluation, scoring, feedback, and performance improvement.

7. KEY FEATURES

7.1 Interview Question Practice: Users can practice technical and HR interview questions based on categories such as Python, Java, C, Data Structures, DBMS, Computer Networks, Operating Systems, and general interview questions.

7.2 Mock Interviews: The platform can simulate an interview environment with technical and HR questions, answer submission, evaluation, and score generation.

7.3 AI-Based Feedback: Feedback can help users understand correct answers, missing concepts, answer quality, and communication improvements.

7.4 Performance Scoring: Users can receive scores for technical knowledge, communication, answer quality, and overall performance.

7.5 Progress Tracking: Users can monitor questions attempted, mock interviews completed, scores, previous performance, weak areas, and improvement.

7.6 User-Friendly Dashboard: The dashboard provides access to Start Interview, Practice Questions, Mock Interview, Results, Performance, and Profile.

8. SYSTEM REQUIREMENTS

Hardware: Computer/Laptop, minimum 4 GB RAM, internet connection, keyboard and mouse.

Software: Windows/Linux/macOS, Google Chrome/Microsoft Edge/Firefox, internet connection, and Base44 AI.

9. TECHNOLOGY USED

Base44 AI: Base44 is an AI-powered application development platform that allows developers to create applications using natural-language instructions. For this project, Base44 was used to accelerate the development of the web application.

Benefits include AI-assisted application development, natural-language prompting, rapid prototyping, frontend generation, backend functionality, data management, authentication support, and deployment/hosting.

10. SYSTEM ARCHITECTURE

The basic architecture of the system is:

```
USER
  ↓
WEB APPLICATION INTERFACE
  ↓
INTERVIEW / QUESTION / MOCK INTERVIEW MODULES
  ↓
EVALUATION / AI FEEDBACK
  ↓
SCORE & PERFORMANCE REPORT
```

11. MODULES

Module 1 – User Module: Handles registration/login, profile management, access to interview preparation, and previous results.

Module 2 – Question Practice Module: Provides questions organized by subject, difficulty, interview type, and technical/HR category.

Module 3 – Mock Interview Module: Simulates a real interview and allows users to answer a series of questions.

Module 4 – Evaluation Module: Analyzes submitted answers and generates feedback and scores.

Module 5 – Performance Module: Displays scores, previous attempts, progress, weak topics, and improvement areas.

12. WORKING OF THE SYSTEM

Step 1: User opens the platform.
Step 2: User selects preparation mode such as Practice Questions or Mock Interview.
Step 3: Platform presents interview questions.
Step 4: User enters and submits answers.
Step 5: Platform evaluates responses.
Step 6: User receives feedback.
Step 7: System provides performance score.
Step 8: User reviews weak areas and continues practicing.

13. DEVELOPMENT USING BASE44 AI

The project was developed using an iterative AI-assisted development process. First, project requirements were described using natural-language prompts. Base44 generated the initial application structure and interface. The application was then refined through additional instructions for features, layout, workflows, and user experience.

Development process: Project Idea → Problem Identification → Feature Planning → Prompt Creation → Base44 AI Application Generation → UI/Feature Refinement → Testing → Bug Fixing → Final Application → Deployment.

14. SAMPLE PROMPT USED

Create a modern AI Interview Preparation Platform for college students and job seekers. The application should allow users to practice technical interview questions, practice HR interview questions, take mock interviews, submit answers, receive AI-based feedback, get scores, track interview performance, view previous results, identify weak areas, and provide a clean responsive dashboard. Include navigation for Dashboard, Practice, Mock Interview, Results, Progress and Profile.

15. USER INTERFACE

The application follows a simple and user-friendly interface. Main pages include Home Page, Login/Register, Dashboard, Interview Practice, Mock Interview, Results, Performance/Progress, and Profile. The interface is designed to be responsive.

16. DATABASE / DATA MANAGEMENT

The application may maintain user information such as User ID, Name, Email and Profile details; interview information such as Interview ID, Interview type, Questions, User answers, Score, Feedback and Date; and performance information such as Previous scores, Number of attempts, Average score, Weak areas and Improvement records.

17. TESTING

Testing is performed to verify that the application works correctly.

Functional Testing: Open application → Home page displayed; Start practice → Questions displayed; Submit answer → Answer submitted; Complete interview → Result generated; View result → Score and feedback displayed; Open dashboard → User performance displayed.

UI Testing: Navigation, buttons, forms, responsive layout, text readability, page loading, and user interaction are checked.

18. ADVANTAGES

Easy to use; interactive interview preparation; saves preparation time; structured practice; performance scores; identification of weak areas; improved interview confidence; browser accessibility; and usefulness for students and job seekers.

19. LIMITATIONS

AI-generated feedback may not always perfectly represent a real interviewer's opinion. Internet access is required. The quality of feedback depends on questions and evaluation logic. Advanced interview

simulation may require additional AI integrations. The application is a preparation tool and not a replacement for real interviews.

20. FUTURE ENHANCEMENTS

Voice-based interviews; speech-to-text answers; AI interviewer chatbot; facial expression analysis; real-time communication analysis; resume-based interview questions; job-role-specific interviews; company-specific interview preparation; coding interview environment; personalized preparation plans; leaderboard; email notifications; interview history analytics; and multi-language support.

21. RESULT

The AI Interview Preparation Platform was successfully developed as a web application using Base44 AI. The application provides an integrated environment for interview preparation through question practice, mock interviews, scoring, feedback, and performance tracking.

Live Application: https://swinging-prep-master-ai.base44.app

22. CONCLUSION

The AI Interview Preparation Platform provides a useful solution for students and job seekers who want to improve their interview skills.

The application combines interview practice, mock interviews, evaluation, scoring, and performance tracking in one platform. Using Base44 AI simplifies the application development process by enabling AI-assisted generation and iterative refinement of application functionality.

The project demonstrates how AI-assisted application development can be used to create practical educational and career-development applications quickly.
